

panxora API Trading

You can use the Panxora API on the paper trading practice account as well as the live trading account. Two factor authentication needs to be enabled to set up API keys.

To set up 2FA, log into your account and access the 2FA menu from settings.

A screenshot of the 'Generate New API Key' dialog box. The dialog has a title bar with '+ Generate New API Key' and window control buttons. It contains a table with columns 'API Key' and 'Actions'. Below the table is a text input field for 'Your Key Name'. There are two sections: 'Read-Only' and 'Trading'. The 'Read-Only' section includes: Cash Balances, Cash Movements, Cash Trades, Cash Orders, Margin Positions, Margin Trades, and Margin Orders. The 'Trading' section includes: Cash Trading and Margin Trading. Each item has a toggle switch, all currently set to 'NO'. Below these sections is a text input field for 'Your 2FA Code' and a 'GENERATE API KEY' button. At the bottom, there is a warning message: 'For security reasons you must have Tw-factor Authentication enabled on your account before creating your API key. If you have not yet enabled Two-factor Authentication on your account please enable this before proceeding with creating your API key.'

The menu to generate keys is also accessed from the settings menu.

API documentation can be found at: <https://api-doc.panxora.io/swagger-ui.html>
