Find the API creation page on your cryptoexchange. Select which functions to include in the API key as illustrated. After saving the key on the crypto-exchange you will need to paste both the key and the 'API secret' into RMaaS. Select ACCOUNTS from the menu to the left. In ACCOUNT INFORMATION name the exchange account, select the exchange from the dropdown menu. Paste the API key and the API Key Secret and save the details. RMaaS will now set up and test the connection with your exchange.

Set up coins to be risk managed

Q DASHBOARD		9				-
OT PROFILE SETTINGS	BASKET TRAC RISK MANAGE					Z.
ACCOUNTS	TARGET ASSETS					COMMIT CHANGE
	sounce	5	CURRENT PRICE	QUANTITY HELD	PERCENTAGE	TARDET QUANTI
	RMaaS	a	ADA 2.47	0	0	18073.:
	RMaaS	- 6	BTC 47206.5	0	0	0.9
	RMaaS		ETH 3481.25	0	0	0.0
	RMaaS	- 1	JNI 24,398	0	0	0.5
	Fixed	- 1	JSD 1	90895.1929	100	

From the Accounts menu, select the ASSET ALLOCATION tab.

Select the Risk Management Radio button. Then from the **SOURCE** column select RMaaS for assets that should be risk managed. If you do not want an asset to be risk managed, just leave this menu item on fixed.

Tap the **COMMIT CHANGES** Button when you are happy with the choices. Return to the DASHBOARD. Except for trades, metrics are updated once a day.
